

ONLINE BUSINESS REPORTS WITH ULTIMUS DASHBOARD FOR SHAREPOINT

Ultimus Dashboard™ for SharePoint enables businesses to display key business and process reports in a dashboard to give visibility across the entire enterprise. Ultimus Dashboard brings point and click deployment using existing Microsoft SharePoint Portal Server or Microsoft SharePoint Services. By combining Ultimus Dashboard with the Ultimus BPM Suite, any organization can create an ideal platform for automating, deploying and monitoring their most important business processes.

Ultimus BPM Suite

The Ultimus BPM Suite is a complete business process management system that improves organizational productivity and responsiveness, reduces costs, and accelerates cycle times. The Ultimus BPM Suite provides a collaborative, programming-free process modeling and development environment, flexible integration and workflow capabilities, powerful management tools, and easy to use Web interfaces for process participants, delivering the lowest cost of ownership available in the industry.

The Ultimus solution is built on a Microsoft foundation, leveraging the .NET Framework, Microsoft Windows Server 2003, Microsoft SQL Server, and the Microsoft Office System. To enhance the integration capabilities of the Ultimus BPM Suite, Ultimus is adding support for the Ultimus Dashboard. Through this integration, customers will be able to create detailed business level and process level reports accessible on a SharePoint portal as part of their overall Ultimus reporting capabilities.

Ultimus Dashboard Benefits

Data Integration

- Business data and process data are tightly integrated in a unified report.
- Ultimus Dashboard users have the ability to group business and process data in any number of ways.
- Ultimus Dashboard leverages the power and scalability of Web Services for flexible integration.

Ease of Deployment

- Ultimus Dashboard uses standard Microsoft SharePoint Web Parts and is easily deployable in any SharePoint portal page.
- Using a full-featured Ultimus Dashboard creation wizard, report authors can quickly create powerful custom reports via a straightforward point and click interface.
- Once the Ultimus Dashboard reports are created, users can quickly generate reports via easy to use Web Parts.

End-to-End Process Monitoring

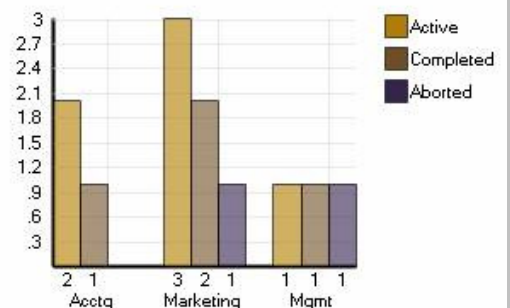

- Using Ultimus Dashboard, business managers have insight into many business and process level activities in their departments.
- Ultimus Dashboard allows users to check the detailed status of process incidents they have initiated.
- Workflow managers can use Ultimus Dashboard to view both overall Ultimus BPM Server activity and detailed incident and task activity.

Example of Ultimus Dashboard

A common process that Ultimus automates is purchase order requests. An employee from a specific department makes a request to purchase a particular item or items. The request is reviewed by a purchasing officer, and the request is accepted or denied.

With Ultimus Dashboard, not only can custom reports be created to report on the status of the purchase order workflow incidents, but also the business data can be organized using business parameters. For example, the purchasing officer can generate detailed reports to stratify purchase order requests across company departments. Ultimus Dashboard can organize and display business and process data in any way desired in order to better understand business activity levels and trends.

Incident Status By Databound Variable

Ultimus Dashboard provides business managers rapid, fingertip access to vital business information so they can make timely, well-informed decisions.
