Ultimus

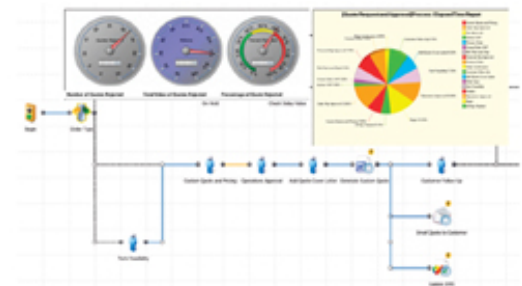

Integration with Business Objects Products: Ultimus provides seamless integration with Crystal Reports through a web services layer for web-based reports. For local access, Ultimus also provides an Integration Kit.

Ultimus has become one of the most widely deployed BPM solutions in the world, enabling enterprises to increase profitability by automating, managing and optimizing business processes. Fundamental to this success has been Ultimus' flexibility in supporting business processes the way customers want to define and execute them.

The Ultimus Adaptive BPM Suite V8 is a scalable enterprise BPM platform with a complete set of Adaptive Technologies including; the patented Adaptive Discovery Rules Engine; the Ultimus True SOA Server, interactive BAM, and the Ultimus Innate Collaboration Client. These adaptive technologies provide unparalleled flexibility in adapting to the people who manage and participate in business processes, the ecosystems they work in, and the change that is common to both. Ultimus uses a no-coding approach that accelerates time to deployment and provides easy to use interfaces to IT teams, work teams, business analysts, and managers alike. This adaptive, human-centric approach empowers people across all work functions to drive process improvement.

To drive optimization, Ultimus provides Business Intelligence capabilities for both business and process data. Ultimus iBAM provides dashboards that monitor real time key performance indicators and "interactive" controls that let managers adjust the process flow in real time, directly from their desktop. Ultimus provides a rich set of reporting tools internally as well as advanced reporting and root cause analysis through integration with Crystal Reports. The combination of analyzing both process and business data provides visibility into all the data required to properly analyze and optimize core business processes.

Ultimus Adaptive BPM Suite V8

FEATURES & BENEFITS

- **Adaptive BPM Platform** a BPM platform that extracts and exposes core process components such as: roles, rules, steps, forms, and integrations so they can be changed by more people and without coding
- **Ultimus Innate Collaboration** Ultimus has the ability to handle exceptions, change, and collaboration "built-in" to the product so workers can interact and adapt without needing IT involvement
- **Ultimus True SOA Server** a BPM server that uses web services as the primary way of consuming and exposing data and supported with a 3-D XML Data-model for mapping to 3rd party hierarchical schemas
- **Adaptive Discovery** this patented technology proactively identifies (unruly events) and empowers process owners to change, test, & deploy rules in minutes, using drag & drop tools and without coding
- **Ultimus Business Information Services** a web services layer that allows Crystal Reports to access data directly from the Ultimus True SOA Server
